

2006 ENERGY STAR NEW MILLENNIUM BUILDER AWARD CUSTOM BUILDER FRONT RANGE

The 2006 New Millennium ENERGY STAR Builder Award recognizes Aspen Homes of Colorado, Inc., as a market leader in the Colorado home building industry for their focus on the construction and sale of high-performance homes. Their homes exceed the energy requirements of the U.S. Environmental Protection Agency's ENERGY STAR for New Homes program. This award applauds Aspen for their excellent demonstration of a whole-house, "systems" built, approach to improving homes' performance in the areas of comfort, health, safety, durability, and environmental sustainability.

Aspen Homes received an award in the Custom Builder category for their custom, net-zero home built off site in northern Fort Collins. This home is a pioneer in energy efficient building in Northern Colorado, and utilizes a systems-built approach incorporating solar panels and a geothermal heat pump to achieve an annual electric utility bill of zero.

This is the fourth year in a row Aspen Homes has received the prestigious New Millennium award.
